

[Environmental policy]

Basic principle

AuBEX Group aims to contribute to the development of world education and culture, elderly longevity and health promotion through the manufacture and sale of felt nib and medical equipment, and in its business activities, protection of the resources on this earth and global warming. We put prevention of environmental pollution as the most important issue and establish and maintain an environmental management system to continuously improve environmental preservation activities.

Conduct guidelines

1. Construction, operation and improvement of environmental management system (EMS)

In order to minimize the environmental impact of its business activities for the purpose of conserving the global environment, the Group has established an EMS and has set environmental objectives and environmental targets according to this action guideline and periodically reviews. We will continue to maintain and improve EMS, protect the global environment and resources, and strive to prevent local pollution.

2. Compliance with environmental laws and regulations

We will strive not only to comply with environmental laws, ordinances and regulations on the remarkable environmental aspects related to our business activities, but also to establish our own voluntary management standards, to protect resources and prevent environmental pollution. In addition, we actively work on the design and development of new products leading to the protection of resources, pollution prevention, and the development and improvement of the process accompanying them.

3. Efficient use of resources and energy

We will promote resource conservation, energy conservation, pollution prevention and continuous improvement activities of 3R (reduce, reuse, recycle) in all areas of business activities.

4. Publicize and disclose environmental policy

We will notify all employees of our environmental policy and will work to improve environmental awareness and moral through participation by all employees including cooperating companies and to practice and continually improve our environmental preservation activities.
